

## Report

Diagnosis: Vascular lesions

Date	Area	Image	Notes
2024-03-15	786.29 mm <sup>2</sup>		The next steps of care for a patient diagnosed with Vascular lesions with a size of 786.29 mm <sup>2</sup> may include close monitoring of the lesion for any changes and potential treatment options such as laser therapy or surgical removal, depending on the specific characteristics and location of the lesion. It is important to consult with a healthcare provider for personalized recommendations and management plan.
2024-03-15	199.24 mm <sup>2</sup>		The patient's Vascular lesions have decreased in size from 786.29 mm <sup>2</sup> on 3/15/2024 to 199.24 mm <sup>2</sup> currently. This represents a significant reduction in the size of the lesion. The patient reports experiencing itchiness. It would be beneficial for the patient to inform their physician about the reduction in lesion size and the symptom of itchiness for further evaluation and management.
